Our Vision

“To create an AI-powered chatbot that serves as a trusted financial companion for clients, driving engagement and loyalty”

The vision is to build an AI-powered chatbot that acts as a reliable financial partner for clients. It will provide personalized financial guidance and support. The chatbot will be easy to use and available anytime. It will help clients make informed financial decisions.

By offering valuable insights and assistance, it will increase client engagement. The goal is to foster trust and build long-term loyalty with clients.

Objective

Enhancing Customer Experience

Our chatbot aims to revolutionize customer interaction by providing personalized recommendations based on user profiles, immediate 24/7 support that caters to individual needs and preferences

Streamlining Operations

By automating routine inquiries and operational tasks, the chatbot frees human advisors to focus on high-value interactions and strategic decision making. Resulting in improving efficiency and service quality.

Providing Real-Time Market Data

The chatbot will serve as a vital conduit for real-time market data, empowering clients with timely insights necessary for informed trading decisions. It aims to be a Secure & compliant interaction.

Current Challenges in Financial Services Firms

❖ Customer Service Limitations

Long wait times, Limited availability of human advisors for 24/7 support

❖ Personalization

Difficulty tailoring advice to individual client needs

❖ Data Overload

Clients overwhelmed by market data and investment options

❖ Operational Costs

High costs of manual processes and customer service

❖ Compliance Risks

Manual processes creating inconsistent regulatory adherence

❖ Competitive Pressure

Competitors launching digital-first financial services

Key Features of AI-Chatbot

Natural Language Processing

Utilizing advanced algorithms, our chatbot interprets and processes human language in its natural form, enabling it to understand and respond to inquiries effectively and contextually.

Integration with Trading Platforms

The AI chatbot will seamlessly integrate with various trading platforms, ensuring consistent communication and access to critical trading data for enhanced decision-making.

Personalized User Interactions

Employing data analytics, the chatbot crafts tailored responses based on user behavior and preferences, fostering a personalized experience for each client.

Product Roadmap

Our Roadmap includes:

Phase 1: (Week 1-8)

- Discovery & Planning

Phase 2:(Week 9-16)

- Design

Phase 3:(Week 17-30)

- Development

Phase 4:(Week 31-38)

- Testing & Quality Assurance

Phase 5:(Week 39-44)

- Deployment & Launch

Phase 6:(Week 45-52)

- Optimization & Expansion

Phase 1: Discovery & Planning

Discover

Key Activities:

- Market research & competitor analysis of financial chatbots
- Customer journey mapping and pain point identification
- Stakeholder workshops
- Technical feasibility assessment and platform selection (compliance requirements, and architecture) (tech stack, data privacy, scalability)
- Use Case Identification:
 - Account queries (balances, statements)
 - Trade execution support
 - Portfolio insights
 - FAQs (KYC, tax, settlement)
 - KYC help, account opening, portfolio queries

Define

Key Activities:

- Prioritize features (MVP vs. future phases) (Feature Prioritization)
 - MVP: Self-service, navigation, basic trading queries
 - Future Phase: Personalized insights, cross-sell, advanced analytics
- Draft user stories and acceptance criteria
- Define success metrics(KPIs) —containment rate(deflection rate), CSAT, cost savings, Reduction in customer support calls (~30%)
- Regulatory Review: Ensure compliance with SEBI, KYC, and data privacy norms
- Identify Integration Points(CRM, trading systems, authentication, compliance tools, KYC)
- Evaluate AI platforms (e.g., OpenAI, Google Dialogflow, RASA, Azure Bot Framework)

Deliverables:

- BRD
- PRD
- Customer journey map
- Project timeline and sprint plan
- Feature prioritization matrix (crawl, walk, run approach)
- Compliance framework

Phase 2: Design

Key Activities:

- Design conversational flows (greeting, authentication, fallback, escalation to human agents, feedback).
- Develop wireframes and prototypes for web interface.
- Define tone, personality, and multilingual support.
- Plan for accessibility (WCAG compliance)
- Security architecture (End-to-end encryption, multi-factor authentication)

Deliverables:

- Conversation flow design and flowcharts
- UI/UX prototypes
- Technical architecture document

Phase 3: Development

Key Activities:

- Core AI Development
 - Intent recognition system development
 - Financial knowledge base integration
 - Adaptive Financial Intelligence engine implementation
 - Named Entity Recognition
- Select NLP/LLM platform (e.g., Retrieval-Augmented Generation, Zephyr 7B)
- Integrate with core systems (CRM, support, KYC, trading portal)
- Implement security protocols (encryption, authentication, fraud detection)
- Set up analytics and monitoring tools

Deliverables:

- Working chatbot MVP for web
- API integrations and middleware

Phase 4: Testing & Quality Assurance

Key Activities:

- Unit, integration, and user acceptance testing (UAT)
- Test for edge cases, escalation flows, and fail-safes
- Security and penetration testing
- Pilot launch with internal users and select customers
- Collect user input, refine flows and NLP models

Deliverables:

- Test plans and QA test results
- Bug and issue logs

Phase 5: Deployment & Launch

Key Activities:

- Deploy chatbot on the web platform
- Monitor performance (real-time dashboards for usage, containment, CSAT).
- Training & Knowledge Transfer
- Gather user feedback and iterate on features

Deliverables:

- Production chatbot live (Web + App)
- Training guide for support teams
- Go-live checklist + monitoring dashboard

Phase 6: Optimization & Expansion

Key Activities:

- Add multilingual support (e.g., Hindi)
- Expand capabilities
- Voice integration
- Gather user feedback and iterate on features

Deliverables:

- v2 Roadmap (voice, WhatsApp, deeper integration)
- Monthly performance dashboards
- Enhanced NLP training loop

Success Metrics and Tech Stack

Success Metrics:

- Containment rate (% queries resolved by bot)
- Customer satisfaction (CSAT/NPS)
- Reduction in average handling time
- Increase in digital engagement
- Client Engagement: 70% increase in interaction frequency
- Operational Efficiency: 60% reduction in manual inquiry handling
- Compliance: Zero regulatory violations

Tech Stack:

Layer	Tools
NLP/AI	GPT-4, Claude, Vertex AI, Rasa (optional fallback)
Bot Framework	Azure Bot Service / Dialogflow / Custom
Backend	Node.js / Python + RESTful APIs
CRM / Data	Salesforce, Broking backend, PMS tools
Compliance	Vanta, OneTrust, custom legal logic layer
Analytics	Datadog, Power BI, GA4, Sentiment Tracker

Key Milestones

- Week 8: Requirements Sign-off
- Week 16: Design Approval
- Week 30: Development Complete
- Week 38: Testing Complete
- Week 44: Full Launch
- Week 52: Performance Review & V2.0 Planning

Press Release

FOR IMMEDIATE RELEASE

Motilal Oswal Unveils AI Powered Chatbot to Revolutionize Customer Experience in Finance

Mumbai 28-July-2026

Motilal Oswal Financial Services has launched a brand-new AI-powered chatbot that will make investing and managing finances simpler, faster, and more convenient for its clients. This smart assistant is now live across Motilal Oswal's website and app, and it's ready to help customers anytime, day or night.

The AI chatbot is designed to answer customer queries instantly — whether it's checking portfolio details, getting the latest stock updates or finding research reports. It's easy to use, understands natural conversations, and helps users without the need to call or wait for support.

With this launch, Motilal Oswal is aiming to improve the overall customer experience by bringing quick, reliable, and secure support to everyone's fingertips. The chatbot can even connect users to a human advisor if they need more help, making sure clients always feel supported.

This launch reflects the company's commitment to making investing more accessible and user-friendly. It's a step forward in making investing more accessible and convenient for all. Their goal has always been to combine expert advice with smart technology.

Motilal Oswal has always focused on innovation and trust. With this new AI chatbot, the company is taking a strong step into the future of digital finance, helping investors stay informed and in control — wherever they are, whenever they need.

Crawl-Walk-Run Approach

Phase	Capabilities
Crawl	Basic FAQs, account info, navigation
Walk	Authenticated transactions, portfolio queries
Run	Personalized insights, proactive alerts, cross-sell

Use Cases

Category	Use Case	Description
Orders & Trades	Order Status	“What happened to my order from today?”
Holdings	Demat Holdings Lookup	Show stock/mutual fund holdings
Margin	Margin Balance	Show available margin and exposure
Fund Management	Fund Transfer Status	Status of fund transfer to trading a/c
Corporate Actions	IPO / Buyback Status	Subscription schedule, eligibility, FAQs
Statements	Contract Note Request	Email/download recent contract notes
Charges	Brokerage Charges	“What brokerage did I pay yesterday?”
Education	Order Types & FAQs	"What is SL-M?", "What's the DP charge?"
Support	Report an Issue	“My order was rejected” / “Trade not settled”

Top-Level Chat Button Categories

- Account Information
- Trading & Orders
- Portfolio & Holdings
- Reports & Statements
- Fund Transfers & Margins
- Markets & Quotes
- Financial Education
- Support & Service Requests
- Smart Search (Search Anything)
- List of all Intents given in the Excel

- Personalization Layer (Optional Enhancements)
- Show most-used queries first
- Suggest reports based on behavior (e.g., if client checks P&L every Monday)
- Support multiple languages (Hindi, etc.)
- Multi-device continuation: Chat starts on app, continues on web

Feature Name	User Story	Description	Duration in Weeks
User Authentication	As a user, I want to create an account and log in securely.	Implement user authentication functionality, allowing users to create and log in to their accounts with secure password storage.	2
User Profile Creation	As a seller, I want to create a profile to showcase my sustainable fashion products.	Implement functionality for sellers to create profiles, including a company bio, product categories, and images.	3
Product Listing Creation	As a seller, I want to add my sustainable fashion products to the marketplace.	Implement functionality for sellers to add product listings, including images, descriptions, and sustainability parameters like water use, waste management, and carbon emissions.	4
Product Search and Filtering	As a buyer, I want to easily find sustainable fashion products that meet my needs.	Implement search and filtering functionality, allowing buyers to search for products by keywords and filter by sustainability parameters.	3
Product Detail Page	As a buyer, I want to view detailed information about a product before purchasing.	Implement a product detail page that displays all relevant information about a product, including images, descriptions, and sustainability parameters.	3
Shopping Cart and Checkout	As a buyer, I want to easily add products to my cart and complete my purchase.	Implement a shopping cart and checkout functionality, allowing buyers to add products to their cart and complete their purchase securely.	4
Order Management	As a seller, I want to manage my orders and fulfill them efficiently.	Implement an order management system, allowing sellers to view their orders, manage their inventory, and fulfill orders efficiently.	4
Payment Integration	As a buyer, I want to pay for my sustainable fashion products securely.	Implement payment integration with a secure payment gateway, allowing buyers to pay for their products securely.	3

Feature Set: Core Functionalities of the Chatbot

- Natural Language Processing:** Employing advanced natural language processing techniques enables the chatbot to understand and interpret user queries articulated in natural language, resulting in more meaningful interactions. This functionality is crucial for accurately responding to user inquiries, thereby ensuring high-quality user experience and satisfaction.
- Integration with Financial Systems:** Seamless integration with existing financial systems—such as databases, transaction processing systems, and customer relationship management software—ensures that the chatbot can access real-time data and conduct operations such as monitoring account statuses, processing transactions, and providing tailored service based on user profiles.
- User Personalization:** In a competitive environment, a personalized user experience can provide a significant advantage. The chatbot will utilize data analytics to tailor interactions based on user history, preferences, and financial behavior, creating relevant and engaging dialogues that enhance customer loyalty and retention.
- (Took from MO-Genie)Provide solutions related to account problems and fetch various reports and account details immediately¹.
- Answer questions about clients' accounts, including reviewing trade history and accessing detailed client information²³.
- Handle many service and trading-related queries, delivering personalized experiences tailored to individual clients²³.
- Assist with financial literacy and provide quick access to financial reports and other related information²³.
- Work like a Google search engine for all financial and trading-related queries of MOSL customers, enabling quick self-service without wait times
