# Introduction

- **Slack is a messaging/collaboration app for business to connect people. It helps in keeping a team's communication organised and efficient.**
- **Mission - Make communication simpler, more pleasant and more productive.**
- **Was designed specifically for the office, but has also been adopted for personal use because of its instant messaging system with lots of integrations.**
- **It replaces email with something faster, better organised, seamless file sharing and more secure. Instead of one-off email chains, all your communication is organised into channels that are easy to create, join and search.**

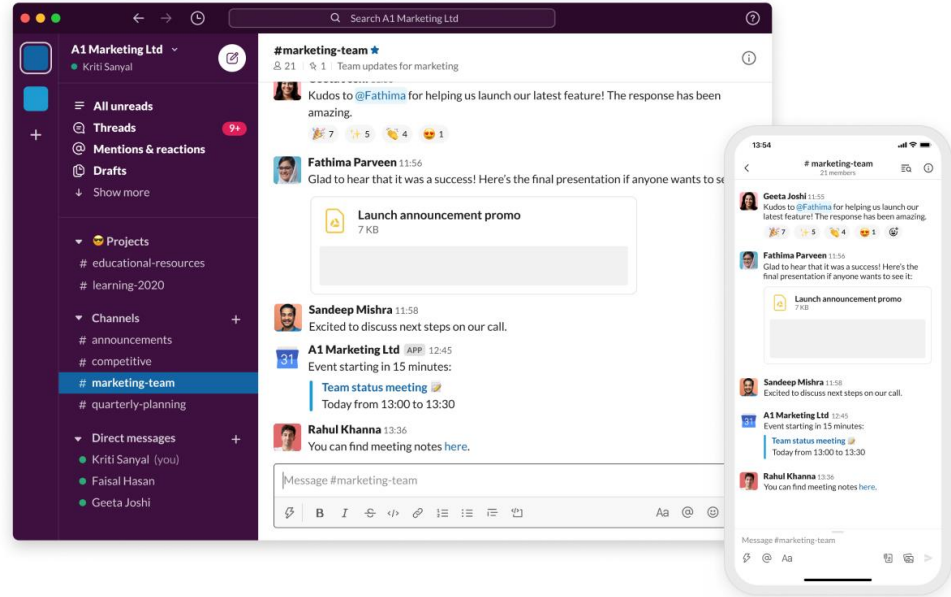

# Facts

# Target Audience

- **Working professionals** - mostly working in companies using enterprise product.
- **Students** - using free or paid version.
- **Casual users**- who use for personal needs (using free or paid version).

# Discovery & Ideation

## **Goal: Introduce new features in Slack for users**

- A survey was conducted to understand the user needs and wants.
- A total of 46 survey responses were collected
- [Survey Link](#)

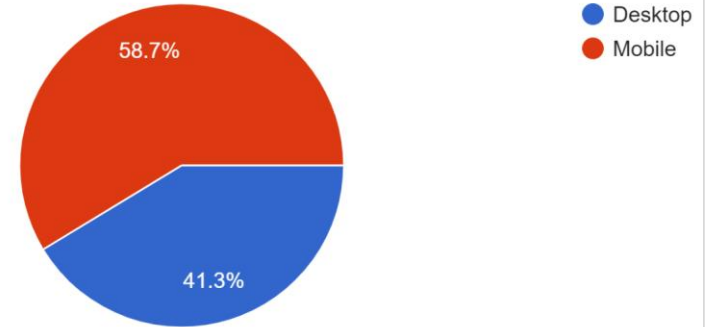

# Survey Analysis

- **58% of people use Slack in Mobile**
- **52% of people would like Screen Sharing option in Mobile**
- **58% of people would want important messages to be marked and noticed by everyone**
- **39% want message received & read indication**

Where do you use Slack the most?

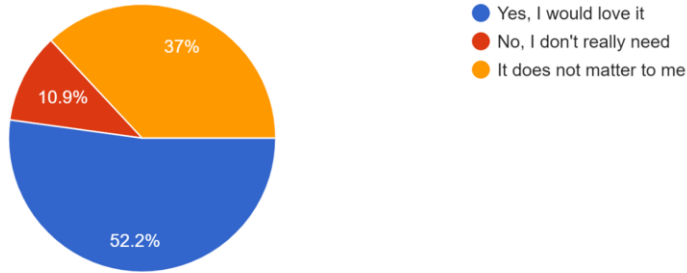

46 responses

# Survey Analysis

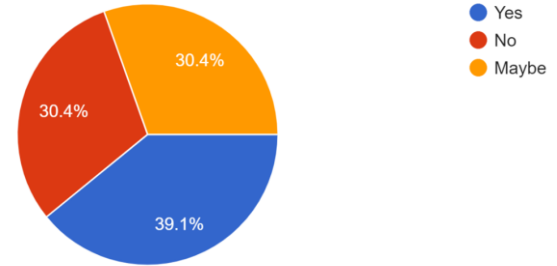

Would you like it if we add screen sharing option for huddle in Slack Mobile?

46 responses

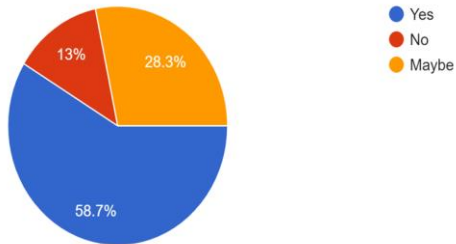

Would you like it if Slack shows whether your message was received or read?

46 responses

Would you like it if Slack gives an option to mark a message as Important or Urgent while sending?

46 responses

# User Personas

Name : Sneha  
Age : 31  
Profession : Project Manager  
in a Edtech company, works  
remotely

**Goal:** To coordinate and communicate with the teams efficiently and conveniently.

**Pain Points:** Sneha is currently working on 3 different projects and usually works with a very tight schedule. She has to travel frequently for work and wants to present her work in a team huddle through mobile. It gets difficult for her to **share her screen** everytime from her laptop as she cannot share it while joining through phone.

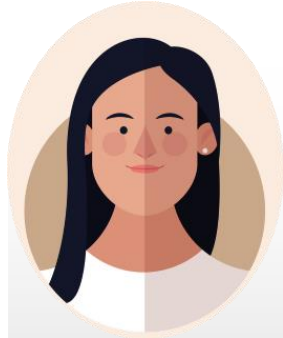

Name : Naveen  
Age : 28  
Profession : Sales Ops  
Manager

**Goal :** To receive an acknowledgement of messages being seen/read receipt

**Pain point :** Naveen uses slack as primary medium of communication with his team and other stakeholders. He wants to know if someone he messaged actually **saw his message** or not, both on private conversations and channels.

# User Personas

Name : Lata

Age : 30

Profession : Product Manager

**Goal:** To not miss any important/urgent messages

**Pain Points:** Lata is working hybridally in startup and is required to coordinate and communicate her cross functional team through slack. She usually puts slack notification on snooze during her meetings but when resumes, it is overwhelming for her to receive so many messages and to figure out which ones are **important/urgent** from them.

# Problems

- **No way to know if a message is received and read by the receiver.**
- **Screen sharing is not available for android and iOS devices in huddle.**
- **No way to mark a message as Important/Urgent while sending.**
- **No Video enable/disable option in Slack huddle**

# Feature Discovery

- **Introduce Screen Sharing Feature in Slack Mobile**
- **Add an option to mark the message as Important/Urgent to ensure that message gets noticed.**
- **Enable tick marks to indicate if a message was received and read.**
